**HAPPINESS IS A
FAST COOLING AC.**

2024 AIR CONDITIONERS RANGE

ABOUT BLUE STAR

With over eight decades of experience in providing expert cooling solutions, Blue Star is India's leading air conditioning and commercial refrigeration company. A company built on trust, Blue Star is recognised as an industry leader and is known for innovation, quality and durability in several countries across the globe.

The Company offers a comprehensive range of products that are not only technologically advanced but also sustainable, energy-efficient and intuitively designed. Packed with contemporary features, these products ensure the best of comfort and convenience. Further, Blue Star prides itself in offering a world-class customer experience and exemplary after-sales service.

Blue Star operates state-of-the-art manufacturing facilities in Himachal Pradesh, Dadra, Wada, and Ahmedabad. Blue Star Climatech, a wholly-owned subsidiary of Blue Star has also recently set up a modern backward-integrated manufacturing plant in Sri City, Andhra Pradesh. These facilities adhere to best practices and stringent global quality standards ensuring products that deliver quality, reliability and durability.

The Company's extensive and continuous investments in research and development are primarily responsible for its success and enviable reputation across the globe. Blue Star has several registered patents, six registered designs and has applied for many new patents.

Recognised for its capabilities, Blue Star works in association with several regulatory bodies under the Government of India to develop standards for safety and efficiency, while representing the industry on national and international platforms.

QUALITY. RELIABILITY. DURABILITY.

At Blue Star, quality is the driving factor in the making of air conditioners. While every Blue Star product is certified and registered as per prescribed industry norms and regulations, each of these undergo highly stringent quality checks. The Company's quality policy is backed by various government and third party agency certifications and their commitment to quality further extends to ensure every product is designed, engineered and manufactured for reliability and increased durability.

CUSTOMER SERVICE

Blue Star strives to ensure high standards of customer experience, with prompt resolutions of concerns and service requests, through a cohesive network of over 2100 centres across India.

Unmatched Technical Competency

By deploying modern technology and applying the right knowledge, Blue Star Care offers expert solutions to technical issues.

24x7 Customer Call Centre

Customers can call Blue Star anytime on 89 7678 1177 or through other digital modes like WhatsApp on 829 100 1177 and email for committed responses and quick resolutions.

Blue Star's Customer Care App

The Blue Star Customer Care mobile app can help you raise a service concern within seconds. A field executive is notified of service requests and will revert with a resolution.

Service On Wheels

Blue Star Care has a fleet of over 150 service crew vehicles that make reliable after-sales service easily accessible, throughout the country.

Same Day Installation

Blue Star Care ensures same day installation across all major cities and towns*.

*For same day installation, calls have to be logged by or before 2.00 p.m.

WORLD-CLASS MANUFACTURING FACILITIES

Himachal Pradesh Plant

With a modest start, from a single plant in Colaba, Mumbai in the 1940s, Blue Star has grown to become an industry authority. It has world-class manufacturing facilities in Dadra, Himachal Pradesh, Wada and Ahmedabad apart from Sri City, which is operated by its wholly-owned subsidiary, Blue Star Climatech.

Blue Star Climatech's Sri City Plant

High Wall Split Air Conditioners being manufactured at Sri City Plant

The use of state-of-the-art manufacturing processes as well as equipment and the adherence to best practices and stringent global quality standards have been primarily responsible for Blue Star's success. They have also helped the company emerge as a strong proponent of the 'Make in India' initiative.

Blue Star Climatech's latest facility at Sri City which commenced production in 2023 is equipped with the latest automation techniques and tools for its assembly line and material handling. It has extensively deployed a slew of initiatives towards IoT and digitisation. The Company lays strong emphasis on sustainability with numerous initiatives on this front such as installing an advanced affluent treatment plant, rain water harvesting, and installing solar panels. It has also been awarded the IGBC Gold Rating for this factory.

Outdoor unit assembly line at Sri City Plant

Buyback/Exchange Offers On Old ACs

Blue Star offers attractive buyback schemes and exchange offers to help customers upgrade their existing air conditioners to new energy efficient ones.

Eco-friendly Refrigerant

Blue Star air conditioners exhibit zero ozone-depleting properties, by using eco-friendly refrigerants, like R32, with a very low Global Warming Potential (GWP) of 675, and R410A with high quality Polyolester (POE) that provides superior heat transfer capabilities. This allows Blue Star Air Conditioners to deliver exceptional cooling with high efficiency.

E-Waste Management

Blue Star is committed to sustainability and is conscious of its responsibility towards the disposal of unwanted or end-of-life products or parts. When it is time to dispose, exchange or upgrade an existing air conditioner, the nearest Blue Star dealer will take it back for an environment-friendly recycling process through Blue Star authorised recyclers.

BEE ENERGY STANDARDS

The star rating of an air conditioner is an indicator of its energy efficiency and is certified by the Bureau of Energy Efficiency (BEE). The star rating aims to help buyers understand the energy efficiency of an air conditioner. More the stars, the higher the energy savings and lower the energy bills for the user. As an air conditioner buyer, you can see a Star Label with the ISEER (Indian Seasonal Energy Efficient Ratio) rating standards affixed on the air conditioner. These vary from 1 star to 5 stars, with 1 star being the lowest and 5 stars being the highest in terms of energy efficiency. Blue Star Air Conditioners are stringently tested and qualify for the BEE energy rating standards.

BEE Energy Standards for Air Conditioners

SPLIT AIR CONDITIONERS – INVERTER & FIXED SPEED						
STAR RATING						
ISEER	MIN	3.3	3.5	3.8	4.4	>5.0
	MAX	3.49	3.79	4.39	4.99	–

BLUE STAR INVERTER TECHNOLOGY

Blue Star Air Conditioners with Inverter Technology use variable speed compressors. These alter their frequency based on the ambient conditions of the room or the number of people present in the room, resulting in the delivery of exceptional cooling and maximum energy savings.

Unlike conventional fixed speed air conditioners, Blue Star's Inverter Air Conditioners have inbuilt micro-controllers that continuously sense the temperature of the air indoors and adjust the speed of the compressor.

With their unique compressor design, Blue Star Inverter Air Conditioners can enhance their cooling capacity when the external temperature increases, and can also reduce their cooling capacity to deliver optimum cooling. This not only helps in cooling the room faster when needed but also maximises energy savings.

Fixed Speed Compressor

Operates either at full capacity or not at all.

RUNS AT A FIXED SPEED OR STOPS

Inverter Compressor

Adjusts output according to its surroundings because it can run at variable speeds.

CONTINUOUSLY RUNS AT VARIABLE SPEEDS

Advantages of Blue Star's Inverter Technology

Fast Cooling

Maximum Energy Savings

Quiet Operation

AI PRO

Now experience an intelligent way to cool your room with Blue Star's latest technology, AI Pro.

This is based on innovative and intuitive algorithms that drive the performance of the AC ensuring not only utmost comfort by cooling the room fast, but also maximising energy savings at the same time.

AI Pro senses the ambient temperature outside and the conditions inside the room. It then intelligently optimises the cooling and fan speed to ensure maximum comfort. AI Pro can be enabled by pressing the mode button on the AC remote.

Benefits:

Effective
Cooling

Optimised
Efficiency

Enhanced
Performance

Senses. Adjusts. Adapts.

CONVERTIBLE COOLING

Due to varying climatic conditions or changes in the number of people in the room, there are periods when one desires the air conditioner to operate at a higher cooling capacity for faster cooling and there are times when one needs the air conditioner to operate at a lower cooling capacity. The Convertible Cooling technology in Blue Star Inverter Air Conditioners ensures optimum usage of energy without any compromise in the cooling performance, while keeping you comfortable in different situations, resulting in more savings on your electricity bills.

How Does Convertible Cooling Work?

This innovative technology empowers users to select the desired cooling capacity. With just a touch of a button on the remote, one can adjust the AC's cooling capacity from 100% down to 80%, 60%, and even 40%. This adaptability ensures that you can enjoy the perfect level of cooling tailored to your specific comfort requirements and the prevailing ambient conditions.

In addition, the Turbo Cool function provides a boost when you need faster cooling wherein the AC will work more than 100% of its rated capacity for a set time.

While some of the inverter models are equipped with a 6-in-1 convertible cooling feature, the rest offer 5-in-1 convertible cooling.

6-in-1 Convertible Cooling:

The 6-in-1 Convertible Cooling mode is available in select models.

6-IN-1 CONVERTIBLE COOLING

MODE 1

100% CAPACITY

MODE 2

80% CAPACITY

MODE 3

60% CAPACITY

MODE 4

40% CAPACITY

4TH TIME PRESS

6-IN-1 TURBO

110% / 115% CAPACITY

5-in-1 Convertible Cooling:

The 5-in-1 Convertible Cooling mode is available across the Split Air Conditioner Inverter Range.

Benefits:

Optimises power usage in real time as per your cooling needs

Keeps you comfortable in varying conditions

Dedicated buttons on the remote to regulate cooling capacity

Makes the AC adaptable to different room sizes

Images shown above are for visual representation only. Actual images may vary. Features may also vary from model to model.

SUPER ENERGY-EFFICIENT

Blue Star's Dynamic Drive Design Technology is a unique engineering design where the inverter drive and the compressor are balanced to achieve enhanced energy efficiency, resulting in optimised cooling capacity. As a result, the 1.0 TR Inverter Split Air Conditioners achieve 6.25 High ISEER, which is 25%* more than the current 5-Star ISEER requirements and 64%* more energy-efficient than a 3-Star Rated Inverter Split Air Conditioner.

Advantages of Super Energy Efficient Air Conditioners:

64%* More Energy-Efficient

100% Cooling Capacity even at 43°C**

Wide Operating Voltage Range

Cools even at 56°C

*1.0 TR Inverter Split Air Conditioners are 25% more energy efficient and 64% more energy efficient in comparison with 5-Star Inverter Split Air Conditioners with 5.0 ISEER and 3-Star Inverter Split Air Conditioners with 3.8 ISEER respectively.

**In standard test conditions.

HOT & COLD INVERTER TECHNOLOGY

Blue Star's Inverter Air Conditioners with Hot & Cold Inverter Technology ensures comfort in challenging climatic conditions. Most air conditioners struggle to function when the external temperature drops below 10°C in winters as they start defrosting, leaving users uncomfortable.

Blue Star's Hot & Cold Inverter ACs are engineered to provide comfort all year-round. They cool during summer, warm in winter, dehumidify in the monsoons, and purify the air in autumn. With stringent testing norms, Blue Star's Hot & Cold Inverter Technology provides warmth even at -10°C and cools even up to 52°C, with minimal derating in extreme conditions. This makes it a reliable and versatile solution for maintaining a comfortable indoor environment in any weather.

Blue Star's Hot & Cold range comes in two variants designed to meet extreme ambient environments.

-10°C to 50°C

Best-in-class heating performance for extreme cold regions such as Srinagar, and other regions across the country where the temperature drops to as low as -10°C

-2°C to 52°C

Powerful heating performance for regions across India including the North where the temperature drops to -2°C

Unique Features of Hot & Cold Inverter Technology:

Powerful heating and cooling in extreme conditions

Works between
-10°C to 50°C
-2°C to 52°C

PM2.5 Filter with Activated Carbon

Auto Defrosting Cycle*

*Only available in -10°C model.

HEAVY DUTY AIR CONDITIONERS

In several regions of India, particularly during scorching summers, temperatures can escalate to 50°C or even higher. Such extreme conditions can create significant discomfort, making it challenging to engage in routine activities. This adverse climate not only hampers productivity but also has a notable impact on overall well-being.

Blue Star has introduced an extensive line-up of Heavy Duty Air Conditioners designed to ensure utmost comfort even in the harshest weather conditions. This range features a robust compressor that provides superior cooling performance even in extreme temperatures up to 56°C. The outdoor units are specially crafted with a spacious heat exchange condenser system, a larger indoor unit, and a 4-way swing to cool every corner of the room. Further, these ACs ensure minimal derating with rising temperatures and deliver 100% cooling capacity at even 43°C. With an impressive athrow of up to 50 feet, these Heavy Duty Air Conditioners are well-suited for cooling large indoor spaces.

Blue Star Heavy Duty ACs are built to last longer and designed to function at wide voltage ranges thereby providing reliable performance in environments prone to voltage fluctuations.

Heavy Duty Inverter Air Conditioners:

Heavy Duty Advantages

Powerful Air Throw up to 55 ft.[^]

Wider coverage area
up to 350 sq. ft.[^]

4-Way Swing

Delivers 100% Rated
Cooling at 43°C^{**}

Cools even at 56°C

Large Size Indoor Unit

^{*}Features vary model to model. Available in both Fixed Speed Technology & Inverter Technology.

^{**}In standard test conditions. [^]Available in 49" size IDU (Indoor unit).

ANTI-VIRUS TECHNOLOGY

Blue Star's Inverter Air Conditioners featuring Anti-Virus Technology are designed with an innovative filter. This filter works efficiently to eliminate microorganisms, viruses, and bacteria from the air. It also ensures that the indoor air you breathe is not only cool, but also healthy, leading to a safer and more comfortable environment.

How does Anti-Virus Technology work?

These Air Conditioners are designed with a unique and effective anti-virus coated filter. Through its positive charge, it attracts the negatively charged viruses like a powerful magnet and deactivates them when air passes through this filter.

Deactivates Viruses*

More than 99.9%* effective against Viruses

Destroys Bacteria*

Removes 99.99%* of Bacteria

Filters out PM2.5

Effectively filters PM2.5, dust, pollen and pet dander

Works as an Air Purifier in Winter

Useful throughout the year

Creative Visualisation

*Under standard test conditions, in a third party lab. Actual product performance may vary depending on room size, temperature, humidity and pollution level. Anti-Virus Technology is not a claim to protect human beings from getting infected or cured from viral infection or any other bacterial infections. 1. >99.9% reduction of MS2 Bacteriophage as per ISO 21702:2019. 2. 99.99% of Inoculums Bacterial as per ISO:22196. 3. >99.9% of Staphylococcus Aureus, >99.9% of Escherichia Coli, as per JIS Z 2801:2010. 4. Indoor Air Quality Analysis; Total Bacterial count 81.4% reduction, Total Fungal count 86.2% reduction as per SS 554:2009 standards.

**Standard frequency of washing once every month

SMART WI-FI AIR CONDITIONERS

Blue Star has launched India's smartest Air Conditioners with Voice Command Technology, packed with remarkable features. These include Customised Sleep, Smart Scheduler for personalised cooling routines, and the ability to group and control up to 15 AC units simultaneously. Additionally, customers can access remote service support via a Smart App.

With Voice Command Technology, users can effortlessly control their ACs using smart devices. These ACs are capable of understanding voice commands in both English and Hindi, ensuring seamless operation. Moreover, they easily pair with Amazon Alexa and Google Home devices. A simple voice command like "Alexa, switch on the AC" is all it takes to operate the Air Conditioner, without the need for a remote or smartphone.

The Smart Wi-Fi Air Conditioners come with a Customised Sleep mode, wherein one can adjust the temperature and the fan speed along with the selection of fan versus cool mode for every hour, over a 12-hour sleep period. Further, one can also switch the AC on or off during this period on an hourly basis. The app allows creation of a personal preference mode with the selected parameters so that one does not need to choose them every night.

Further, through the Smart App one can control the AC from anywhere. This is also useful if you want to cool your room before you get there.

Other than the Smart Wi-Fi range, all Blue Star Inverter Air Conditioners are now smart-ready wherein, by installing a smart module, they can be converted into a smart AC.

HIGH COOLING PERFORMANCE

Designed for High Ambient Conditions

The rising temperatures in Indian cities, combined with the urban heat effect, pose a significant challenge for air conditioners in providing optimal cooling, especially during the peak summer season. While many air conditioners are engineered to operate efficiently up to 35°C, Blue Star Air Conditioners are specially designed to perform in extreme ambient conditions, even as high as 56°C. This ensures a level of comfort that is consistent even in the harshest summer conditions.

Minimal Derating

Higher ambient temperatures can lead to a reduction in the cooling efficiency of an air conditioner, resulting in increased power consumption and decreased durability. Blue Star Air Conditioners

Inverter Air Conditioners Deliver 100% Cooling even at 43°C

address this challenge with specially engineered outdoor units featuring spacious heat exchange systems. These units guarantee consistent airflow without any hindrance, enabling effective heat exchange and higher overall efficiency. Blue Star Air Conditioners are designed to deliver 100%* of their cooling capacity even at high temperatures, up to 43°C. They continue to provide effective cooling at temperatures even higher than 43°C, with only minimal derating, showcasing their exceptional performance in extreme conditions.

*Performance standards and output vary from model to model based on ambient conditions and maintenance of air conditioners at periodic intervals. Under standard test conditions.

NANO BLUPROTECT TECHNOLOGY

The Nano BluProtect coating on the hairpin bend in the indoor and outdoor unit (in the evaporator and condenser) protects the Air Conditioner from corrosion and leakage while providing efficient and long-lasting cooling performance.

NANO BLUPROTECT TECHNOLOGY

What makes Nano BluProtect Technology so special?

Blue Star's Nano BluProtect Technology helps the air conditioning unit withstand a host of aggressive surface-damaging agents. The ACs incorporating this technology are subjected to the Salt Spray Test for over 700* hours and have several benefits.

Anti-corrosion

Enhanced durability that results in uninterrupted cooling

Anti-dust

Cost saving and reduced maintenance expenses

Rust-resistant

Protects against severe climatic conditions in coastal areas and in regions affected by pollutants, smoke and/or salt

Images shown above are for visual representation only. Actual images may vary. Features may also vary from model to model.

*As per internal test standards done in a controlled environment.

ANTI-MICROBIAL FILTER

This filter incorporates a special anti-microbial coating which is formulated to ensure effective microbial destruction as well as long-term control of microbial growth on the filter. Additionally, this advanced coating is free of heavy metals, nano-silver, and halogens, making it an exceptionally safe choice for air conditioners.

DIGIQ PENTA SENSORS

Blue Star ACs are designed with intelligent digital sensors that integrate advanced microcontrollers. These state-of-the-art sensors are engineered to deliver unparalleled accuracy, reliability, and performance in diverse applications. The DigiQ Penta Sensors optimise cooling in varying load conditions and protect critical electronic components.

The ambient, discharge and condenser sensors in the outdoor unit coil as well as the ambient and anti-freeze coil sensors in the indoor unit undergo rigorous testing to ensure reliability in even the most challenging conditions, providing you with uninterrupted cooling.

Indoor Unit Sensors

Ambient Sensor

Discharge Sensor

Condenser Sensor

PRECISION COOLING TECHNOLOGY

Blue Star's Precision Cooling Technology sets a new standard for comfort. With its advanced fuzzy logic and an ultra-wide frequency micro-processor controller, these ACs adapt intelligently by adjusting the operating frequency. This precise control, with a remarkable accuracy of $\pm 0.5^{\circ}\text{C}$, effectively eliminates temperature swings. The result is an unparalleled cooling experience that consistently maintains a comfortable indoor climate, regardless of the ambient conditions.

Other Inverter Air Conditioners

Blue Star's Next-Gen Inverter Air Conditioners with Precision Cooling Technology

ANTI-CORROSIVE BLUE FIN COATING

Specially designed Anti-Corrosive Blue Fin coating on both, the evaporator coils in the indoor unit and the condenser coils in the outdoor unit enhances durability, particularly in humid conditions. This coating serves as a strong barrier against corrosion, significantly extending the lifespan of the AC.

Advantages of Blue Fin Coating

Suitable for humid or coastal areas

High heat exchange efficiency and better cooling

Greater durability

Images shown above are for visual representation only. Actual images may vary. Features may also vary from model to model.

TURBO COOL

The Turbo Cool function provides rapid and powerful cooling within minutes, even in the most extreme summer conditions. Activating this mode prompts the air conditioner to operate at its maximum fan speed and turbo capacity, delivering a fast cooling experience.

4-WAY SWING

Blue Star's automatic 4-way swing feature is thoughtfully designed with motorised horizontal and vertical swings for uniform cooling. This omni-directional airflow ensures that every corner of the room receives the same level of cooling comfort.

Images shown above are for visual representation only. Actual images may vary. Features may also vary from model to model.

DUAL USER SETTING PREFERENCE

With multiple users of air conditioners at home, Blue Star's Dual User Setting Preference ensures two users can personalise and save their preferred climate setting mode. Users can select and save their mode, set temperature, fan speed and swing.

Benefits of Dual User Setting Preference

Personalised "Saved" settings for two users

Instantly sets the preferred mode to enjoy comfortable cooling

Preferred temperature, fan speed, mode and swing settings

PM2.5 FILTER WITH ACTIVATED CARBON

This entails a high-performance PM2.5 filter featuring activated carbon, specifically designed to combat one of the most harmful pollutants we encounter: Particulate Matter (PM) 2.5. These minute particles pose a significant health risk when inhaled. Blue Star's specialised filter creates an electrostatic shield, effectively trapping these tiny, aerosolised particles. This results in indoor air that is not only safe, but also free from unpleasant odours, offering a breath of fresh and clean air.

Images shown above are for visual representation only. Actual images may vary. Features may also vary from model to model.

HEAVY DUTY OUTDOOR UNITS

Blue Star Air Conditioner outdoor units are engineered to perform seamlessly in extremely high ambient conditions, ensuring reliable cooling even at 56°C*. The 2-row coil condensers* in Blue Star Air Conditioner outdoor units are made up of 100% copper, precisely designed to ensure maximum efficiency of the cooling system. The heat exchanger compartment systems ensure uniform airflow without any obstruction, thereby delivering highly efficient heat exchange, resulting in optimised cooling.

The copper tubes are inner-grooved for high heat transfer, enabling them to provide rapid cooling even in extreme ambient conditions.

Highlights of Blue Star's Outdoor Units

- Heavy Duty outdoor unit to cool even at 56°C*
- Superior anti-rust coating to ensure corrosion-free outdoor units
- Special anti-corrosive hydrophilic blue fin copper condenser for more efficient cooling
- Conformal coating on PCBs to protect it from dust and humidity
- Weather-proof enclosures for critical components to ensure long reliability

Advantages of Heavy Duty ODUs

Fast Cooling

Quiet Operation

Longer Durability

Inner-grooved copper tubes in the indoor and outdoor units

High Efficiency Rotary Inverter Compressor

2-Row Condenser Coil

*Available in select models.

Images shown above are for visual representation only. Actual images may vary. Features may also vary from model to model.

BRUSHLESS DC MOTORS

Brushless DC Motors have become the preferred choice for a wide range of applications, particularly in motor control technology. In contrast to conventional motors, these operate on an electronic commutation system which enhances reliability and reduces operational noise even at high rotational speeds.

Increased Efficiency

Enhanced Durability

Quiet Operation

QUIET PERFORMANCE

Blue Star's Inverter Split Air Conditioners are equipped with a specially designed acoustic jacket that effectively minimises noise and vibrations during outdoor operation. This feature contributes to a quieter and more pleasant operating experience.
